¿Masa o bandada?

"Flocksourcing" – un experimento digital para recolectar información sobre el transporte público en sistemas tradicionalmente análogos

Christopher Zegras

en base de trabajo de campo realizado por:
Albert Ching, MCP; Stephen Kennedy, MCP;
Muntasir Mamun y el equipo de Kewkradong

SMART Singapore-MIT Alliance for Research and Technology | FUTURE URBAN MOBILITY | Massachusetts Institute of Technology | KEWKRADONG go... | an initiative of the URBAN LAUNCHPAD

urbanización, información, iteración

¿para quién?

Móviles, Movilidad, Ciudad, Ciudadanía

La Esperanza

DINAMICA	INTERACTIVA	DISTRIBUIDA	PARTICIPATIVA
Tiempo-real	Busqueable	Multi-plataforma	User-Input
Actualizable	Filtrable	Movil	User-Feedback
Escalable	Multi-Nivelado	Barrato	Open-Source
Animable	Multi-Narrativable	Exportable	Transparente
	Funcionalidad		Accesibilidad

Convergencia espacio-temporal

The potential

Dimension	Rides	Surveys
Spatial	lat / long coordinates, destinations	home / work locations
Temporal	time-stamps	weekly ridership, average commute times
Compositional	generalized routes, directionality, seating capacity	gender, age
Conditional	speed, availability of seats	income, phone ownership
Behavioral	ridership counts, female ridership	surveys
Experiential		happiness, comfort, safety

Developing world
(examples from Dhaka)

Automated

Requires user input

Data type	Speed	Collection tool	Public accessibility	Gap
(1) Time Travel time, wait time, road speed	Real-Time	**Analog+** (Hasnine 2011)	**Ad Hoc**	Increase precision + coverage significantly
(2) Space Mapping, directions	(Almost) Real-Time	**None**	**Unavailable**	There is no bus map (online or offline) of Dhaka
(3) Conditions Crowding, service disruptions, safety alerts	(Almost) Real-Time	**Analog+** (Katz and Rahman 2010)	**Ad Hoc**	Increase coverage significantly
(4) Perception Satisfaction, commute time by age, gender, income	Slower Time	**Analog**	**Ad Hoc**	Increase frequency + coverage significantly

Industrialized world

Automated → Requires user input

Data type	Speed	Collection tool	Public accessibility	Gap
(1) Time Travel time, wait time, road speed	Real-Time	**Digital** (using AVLs)	**Closed/Open**	Smaller cities / less frequent routes in big cities; Closed big cities e.g. Singapore
(2) Space Mapping, directions	(Almost) Real-Time	**Digital** (using custom hardware)	**Open**	
(3) Conditions Crowding, service disruptions, safety alerts	(Almost) Real-Time	**Analog** (moving to Digital) (Steinfeld 2011)	**Open but Ad Hoc**	Increased coverage
(4) Perception Satisfaction, commute time by age, gender, income	Slower Time	**Analog** (moving to Digital) (Stephen and Graves 2006)	**Semi-Open but Slow**	More frequent surveys / release of full data set
